you my heartfelt thanks for your generous \$5.00 contribution to the Committee's Presidential Fund.

As the President said in his letter to you "I know of no more important way that you can directly influence the outcome of this election than by contributing to the RNC's Presidential Fund".

And I want to tell you that your contribution is already having a powerful impact. The money you sent is right now enabling us to mount an all-out drive to counter the AFL-CIO's efforts to register and organize thousands of new pro-Democrat voters.

Our own voter registration project will have a profound impact on the President's chances for reelection, and on the campaigns of Republican candidates across the nation.

As we head into the most critical months of our campaign, your support of our Committee becomes even

Local history revived in discovery of "The Evening Herald."

Emergency Home Flood Suggestions

If homes are flooded by ground water, the lake, ditch water or rivers, the City-County Health Department recommends these actions:

■ Remove all furniture, storage items, carpets, etc. from the area being flooded (prior to flooding, if possible.).

■ After the source of flood has been stopped, use a water vacuum or mop dry.

■ To disinfect, a good bactericide is chlorine (Clorox or Purex) at a solution rate of at least 200 ppm (about 2.5 teaspoons per gallon of water).

■ For carpets, dry in place, or remove and dry. Do not use disinfectants on carpets, as it they may bleach the carpets. Steam cleaning is about the only way to disinfect carpets without perma-

nent damage. Professional carpet cleaning services are recommended.

To avert flooding, the Health Department recommends:

If a home is threatened with flooding from sewage, the Health Department recommends:

• Lowering the water table if the sewage is from an individual system.

■ Sandbagging.

■ Diversion of the source of water.

■ Sealing walls and floors (water proofing).

■ Installing drains to divert the water.

■ Installing pumps to lower the water.

■ Stopping the backflow of sewage by using a backflow preventer in the sewage line, or plugging the line.

If the home is actually flooded with sewage, the fol-

lowing steps are recommended:

■ Remove all furniture, stored items, and other loose items that can be removed from the flooded area.

■ After stopping the source of sewage, water vacuum or pump sewage from flooded areas.

■ Disinfect floors and walls with chlorine (Clorox or Purex) with a solution of 200 ppm (2.5 teaspoons per gallon or water). Use chlorine only on materials that will not be damaged by bleaching.

■ Steam cleaning is the only safe way to clean and disinfect carpets. The use of bactericides and other types of disinfectants may permanently damage the carpet. In many cases, replacement of the carpet is necessary. Contacting a professional carpet cleaner is advised.
